

Announcing a Doorphone Visitor Call (Loud Ringer)

The Norstar/BST Doorphone can be programmed to provide page chimes and/or to ring telephones when its call button has been pressed. Sometimes, however, it may be desirable to announce that a visitor has arrived with (for example) a ringer in a warehouse. This would allow personnel to simply answer the door if they are nearby or to differentiate between intercom and doorphone calls.

The optional Door Opening Controller (available from Nortel Networks) is capable of providing a dry-contact closure whenever the call button of the Norstar Doorphone is pressed. This can be used to activate the 1825PM Duet Plus ringer (or the 1826P Talking Duet Plus ringer with programmable announcements).

In the diagram at right, power supply connections are omitted for clarity. The Door Opening Controller requires a separate power supply that has not been added to the requirements section (due to the fact that the power supply included with the 1825PM Duet Plus can provide power for the Door Opening Controller as well).

For Norstar/BST Doorphones

Requirements

- A0518264 BST Doorphone (or Nortel Norstar Doorphone)
- AO618971 Door Opening Controller (Nortel)
- 1825PM Duet Plus
- 1185 Horn Speaker (optional)
- Pre-wire
