

## Norstar / BCM / Meridian 1 / CS 1000 Message Waiting Indication

The 4100 AuxBox can detect the message waiting signal by monitoring the digital wire pair between the telephone and KSU/PBX. The AuxBox then activates a visual alerter such as the Algo 1127P Desktop Visual Alerter or the 1126P Strobe Light.

The AuxBox can be located anywhere along the digital wire pair between the KSU/PBX and telephone. In this application, it would typically be installed near the telephone. Each Algo Visual Alerter includes a cord that plugs directly into the Aux-Box that allows it to be located within 6 feet. It is possible to remotely wire each alerter unit, as explained in the installation guides.

### Requirements

- 4100 AuxBox
- 1127P Desktop Visual Alerter or 1126P Strobe Light
