

Using Nortel Networks A0359184 External Alerter Board

Installing the Nortel Networks A0359184 (NT2K4OWA) External Alerter Board in the above telephones provides a dry contact closure on the second pair of the modular station jack whenever the telephone handset or speaker is active - or the telephone is ringing. This dry contact closure can then be used to trigger an external Alerter product such as a Loud Ringer, Visual Ring Indicator, or an In-Use Light (see diagram).

Information about the installation of the A0359184 External Alerter Board is contained in the Nortel Networks Set and Console Installation Guide under "Add-on modules." A Power Board may also be required if not already installed.

For M2006, M2008, M2216 and M2616 Meridian 1 Telephones
