

In-Use Visual Indicator for (MDC) Centrex Telephones: M5208/5209/5212/5216/5312/5316

Visual notification of a telephone in-use can alert co-worker that a user is engaged on a call particularly when wearing a headset.

The 5004 Centrex Call Monitor detects hook status signals sent to the 5000 series MDC Telephone and activates a dry contact closure output that can be used to activate a desktop or remote visual indicator for visual in-use notification.

The output from the 5004 can be used to activate Algo's attractive and highly visible 1127P Visual Alerter or even brighter 1126P Strobe Light. The 1127P Visual Alerter is suitable for desktops or wall mounting.

Requirements: 5004 Centrex Call Monitor
1127P Visual Alerter
OR 1126 Strobe Light
