

Analog Terminal Adapter for Nortel Softphone

For Nortel IP Softphone 2050

The Algo 4900 USB Analog Terminal Adapter (ATA) enables an analog telephone (including cordless models) - or a fax machine - to be used with Nortel's IP 2050 Softphone (Version 2 B254 or newer).

The 4900 is USB powered from the client PC and provides a RJ11 telephone jack for connection to a single telephone.

Inbound calls will ring the telephone and provide caller ID from the Softphone display. Lifting the handset of the telephone will access dial tone and permit outbound dialing.

Requirements

- IP Softphone 2050 (Version 2.0 B254 or newer) (Nortel)
- 4900 USB ATA
- 1127P Visual Alerter (optional)
