

Noisy Location Handsets & Noise-Cancelling Adapter

For Norstar/BCM T7100, T7208, T7316; CS 1000 / M1 M3900 series

Algo offers two options for noisy environments. Both reduce the transmission of background noise from the handset location and thus provide improved comfort level for the far-end listener. They also enhance security when sensitive information may be part of the background noise.

Algo 1075-series Handsets

The 1075 handset is a modified Nortel factory handset with approximately 10 dB reduced transmit level. Both talker and background noise will be reduced noticeably unless the talker raises their voice level - thus providing an improved signal-to-noise ratio.

| Color | Model |
| Platinum | 1075-66 |
| Charcoal | 1075-70 |
| Ether Grey | 1075-74 |

Algo 1072 Noise Cancelling Adapter

The 1072 Noise Canceling Handset Adapter is an active noise canceling circuit that installs in series with the telephone handset to provide a dramatic reduction in background noise level without attenuating normal transmit speech level.

The 1072 Noise Canceling Adapter is compatible with any Nortel digital telephone for Norstar/BCM, Meridian 1/CS 1000, and IP i200x telephones.

Requirements

- 1072 Noise Canceling Adapter (with power supply)
