RingCentral Provisioning Guide for All Algo SIP Endpoints

For the RingCentral extension choose 'other' and not 'device' when creating the extension for the Algo endpoint.

In the RingCentral administration the credentials for the extension can be found under the tabs: *Phone/Devices/Extension* ==> click on the *Setup/Provision* icon and the credentials are there to copy/paste into the Algo endpoint web interface *Basic Settings/SIP* tab as follows:

Ring Central User Name is entered into the Algo Extension field
Ring Central Authorization ID is entered into the Algo Authentication ID field
Ring Central Password is entered into the Algo Password field

The SIP Domain must be: sip.ringcentral.com:5090
Outbound Proxy must be: sip20.ringcentral.com:5090

Note: If RingCentral provide a different port number than what is referenced above, try their values first.
