

# Detailed End Point IVT Test Plan and Report for **ALGO 8301 Paging Adapter & Scheduler** and **CUCM 12.0**

Test Result	PASS
Test Date	25 <sup>th</sup> February 2019
Product Name	Algo 8301 Paging Adapter & Scheduler
Product Version # (must be generally available)	1.7
Unified Communications Manager Version	12.0
Product Type(Billing, Voice Recording, phone apps etc):	Endpoint
API/Protocol(s) Used	SIP
Partner IVT Contact Name:	Paul Zoehner
Partner IVT Contact Phone:	+6044543799
Partner IVT Contact Email:	<a href="mailto:pzoehner@algosolutions.com">pzoehner@algosolutions.com</a>
IVT Lab Location (EMEA or US):	US
Partner Main Support Number	+6044543792
Partner Main Support Email	<a href="mailto:support@algosolutions.com">support@algosolutions.com</a>

# 1 Introduction

This document is the detailed Interoperability Verification Test Plan and Report for [CUCM 12.0 and Algo 8301 Paging adapter & Scheduler](#).

## 1.2 Entry Criteria

Before testing can begin 3rd party partner shall run this entire test plan in their lab and verify that results. If there are any test cases not supported, not applicable or are not successful, the partner should consult with tekVizion test team. Once testing has been initiated, the device under test is considered frozen for certification testing purposes. No software/firmware load can be changed during the testing period. However, configuration can be modified to accommodate testing.

## 1.3 Exit Criteria

To be deemed certified as configured, the devices under test should have zero severity 1 and severity 2 defects and up to two severity 3 defects detected.

If a severity 1 or 2 failure occurs, irrespective of who is responsible for the problem (Cisco or the 3rd party product) the testing is considered unsuccessful.

Table 1 Defect Severity Level Description

Severity	Description
1	Catastrophic - Common circumstance causes the entire system or a major subsystem to stop working affects other areas/devices no workaround
2	Severe- Important functions are unusable does not affect other areas/devices no workaround
3	Moderate - Very unusual circumstances cause failure minor feature doesn't work at all there's a low impact workaround

If any tests fail, the configuration will be verified to resolve the issue. If the issue cannot be resolved, the tester will attempt to continue testing if possible. If the testing cannot proceed without this problem being resolved, the testing is considered complete and the devices under test are deemed not certified.

The following procedures are followed when testing fails:

- Preliminary analysis is made to determine the source of the problem. If the problem is related to a device under test, then the problem is reported to that partner. If the problem is deemed Cisco related, the problem will be reported to Cisco, but the partner is

- responsible to open a TAC case with Cisco developer services. Partner should provide the TAC case number to the test team so they can document it in the report.
- If testing can continue past this failure, the other test cases will be tested and verified for pass or fail. If the testing cannot progress past this problem, testing will be halted and a final test report submitted to Partner and Cisco.
  - All problems and resolutions encountered during testing are documented in the final test report.
  - If a severity 1 failure occurs, irrespective of whom is responsible for the problem (Cisco or the 3rd party product), the testing is considered unsuccessful.

Any deviations of the test execution or problem acceptance are documented in the test report.

Note: The Cisco approval process may increase/decrease the severity level of the defect after the test cycle, if considered necessary.

## 2 Product Overview

The 8301 is a PoE IP Paging Adapter for integrating legacy analog voice paging systems into a premise or hosted UC environment as a third party SIP endpoint. The Adapter eliminates the need for an ATA or FXS port. Features include G.722 wideband support with an isolated and balanced line output for optimum clarity and intelligibility without hum or noise.

To the network side, the 8301 is a SIP endpoint for easy integration with an IP telephone system. It is configured using the intuitive web interface or provisioning capabilities.

On the paging side, the 8301 provides balanced audio output using both an XLR connector and terminal block for easy connection to an amplifier, along with a dry contact closure if required by the amplifier.

## 3 Executive Summary

The following summarizes tekVizion's findings:

- **Test Case Failures:**
  - None
- **Test Cases Not Supported:**
  - None
- **Test Cases that are Not Applicable:**
  - None

- **Test Cases that were Not Executed:**
  - None
- **Observations:**
  - Algo 8301 Paging adapter & scheduler is manually registered with CUCM 12.0 using the Digest Authentication.
  - Algo 8301 Paging adapter & scheduler has 2 types of Dial extensions.
    - Page extension: It provides announcements and talk back facility.
    - Ring extension: It is used for ring notification.
  - Algo 8301 Paging adapter & scheduler has 3 working page modes
    - One Way mode: It has only one way audio path.
    - Two Way mode: It has 2 way audio path and enables talk back facility in the device.
    - Delayed Page mode: It stores the page audio temporarily, and broadcasts it after the call is ended.
  - G 722 codec is supported in Algo 8301 Paging adapter & scheduler.
  - Algo 8301 Paging adapter & scheduler can be a part of call functions like call Hold, Resume, Conference, Transfer etc. But these functions cannot be performed on the Device.

## 4 Features Tested

- All test included in this test plan were executed unless otherwise noted.

### 4.2 Items Not Tested

Features that are specific to the internals of the 3rd party product or any features not listed will not be tested.

- All test included in this test plan were executed unless otherwise noted.

### 4.3 Assumptions

- Interoperability of 3rd party products – Testing will cover only features in 3rd party products that result in events to and/or from the CUCM or specified PSTN gateway.
- Call Processing – PSTN interface and Cisco SIP call processing traffic for all testing (excluding manual sampling run during traffic) may be generated using simulators.

## 5 Test Environment

### 5.1 Administration, Testing and Debugging tools

*Tools used/required – Identify any tools required by 3<sup>rd</sup> party (partner under test). Also add Trace and Debug settings here.*

*Table 2 Administration, Testing and Debugging Tools*

Product Name	Version	Type	Purpose	Units	Notes
<b>Test Tools</b>					
None					
<b>3rd Party Tools</b>					
None					
<b>Debug Tools</b>					
FileZilla Server	0.9.60	File server	For retrieving CDR from CUCM	1	Lab Provided

## 5.2 Equipment Requirements

Table below identifies all equipment/versions used for in this IVT.

Table 3 Equipment and Product Information

Product	Version	Type	Purpose	Units	Notes
<b>Cisco Products</b>					
CUCM	12.0	Call Server	Call Processing (For Local and Remote)	2	Lab Provided
CUPS	12.0	Presence Server	Presence and Messaging	1	Lab Provided
CIPC	8.6.1.0	Soft Phone	Endpoint	1	Lab Provided
Cisco Jabber	12.0	Soft Phone	Endpoint	1	Lab Provided
<b>3rd Party Products</b>					
8301 Paging adapter & Scheduler	1.7	Paging adapter	Endpoint	1	Customer provided

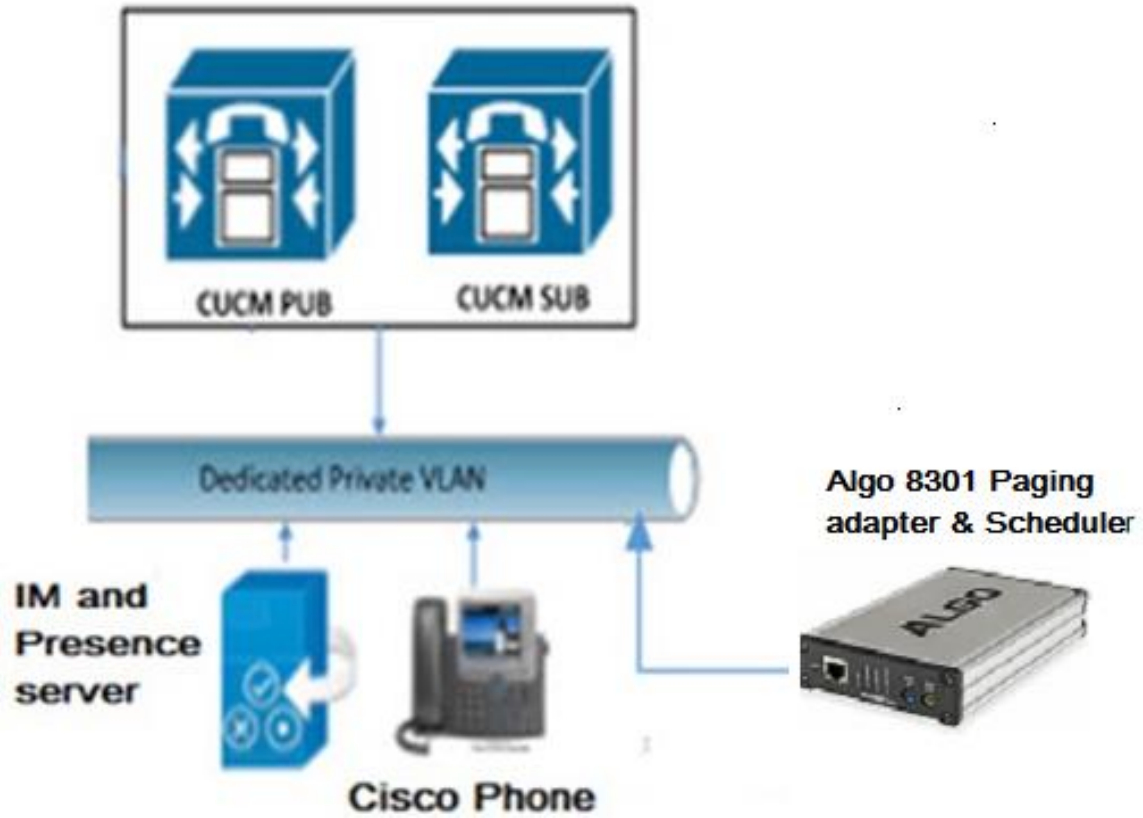

## 5.3 Cisco Phones

Table 4 Cisco Phones Information

Cisco Phone Model	Phone Firmware Version	Protocol	POE/Power	Units	Notes
7942	SIP46.9-4-2SR3-1S	SIP	POE	2	Lab Provided
7942	SCCP42.9-4-2SR3-1S	SCCP	POE	2	Lab Provided
8945	SIP894X.9-4-2SR3-1	SIP	POE	1	Lab Provided
7975	SCCP75.9-4-2SR3-1S	SCCP	POE	1	Lab Provided
7965	SIP45.9-4-2SR3-1S	SIP	POE	1	Lab Provided

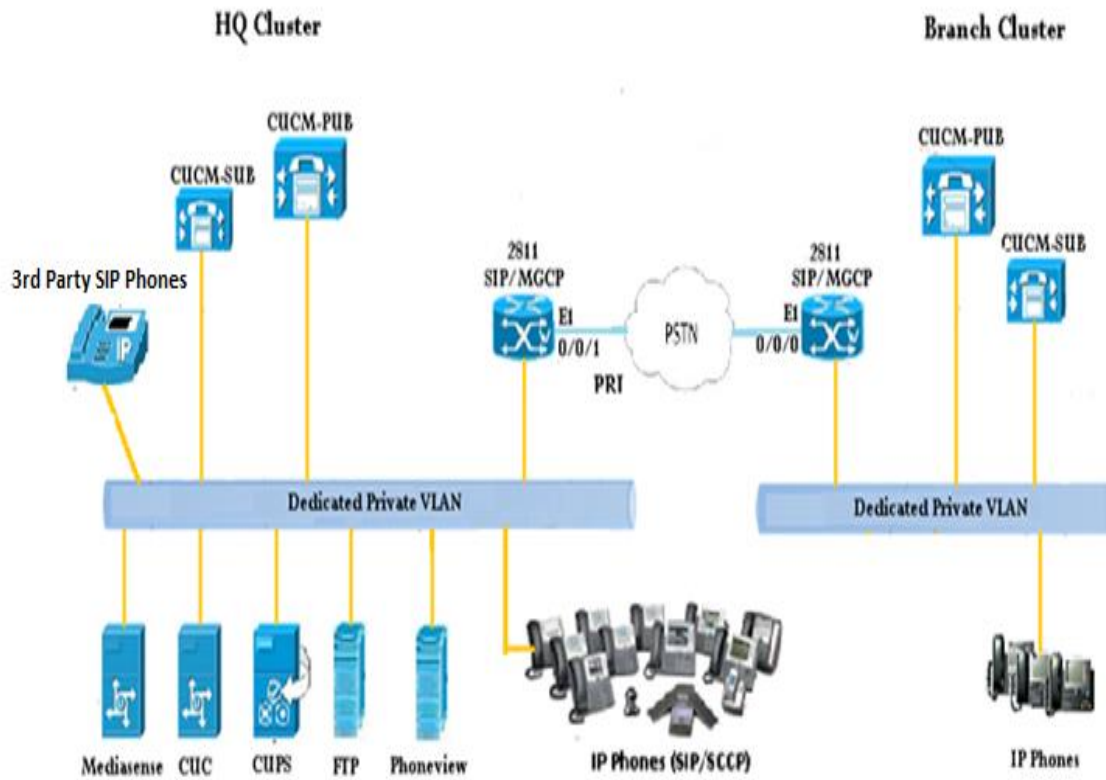

## 5.4 Deployment Architecture

Figure 1 - Deployment Architecture

## 5.5 Test Environment Architecture

Figure 2 – Test Environment Architecture

## 6 Test Cases

This section details the tests that will be performed during the testing period.

Result	Description
PASS	The test case passed with no exceptions
Fail	The test case failed – details of the failure are noted in the Comments column
N/A	The test case is not applicable to the product under test. Justification must be provided in the Comments column.
N/S	Not supported. While the feature tested by this test case generally would be considered a standard feature for this product category, this specific product (or this specific release) does not support the feature.
N/T	Not tested. The feature is supported by the product under test, but external factors (lab configuration, e.g.) prevented execution of the test. Justification must be provided in the Comments column.
Blocked	Other test case failures prevented the execution of this test. Reference to the corresponding failed test case must be provided in the Comments column.

### 6.1 Phase 1 Installation and Configuration Tests

Test is focused on ensuring that the 3rd party product (DUT) is registered with Call Manager successfully.

#### 6.1.1 Register DUT to Cisco Call Manager

Test Case Details	
Title	Register DUT to Cisco Call Manager
Description	Verify 3rd party endpoints (DUT) are registered in Call Manager successfully
Test Setup	
Procedure	<ol style="list-style-type: none"><li>1. Connect the DUT in local CUCM cluster</li><li>2. Go to DUT(s) settings to verify network and load information</li><li>3. Associate end users to DUT(s)</li><li>4. Register DUT in local CUCM cluster with DN's</li></ol>
Expected Results	<ul style="list-style-type: none"><li>• CUCM Administration GUI display the DUT(s)</li></ul>

	<ul style="list-style-type: none"> <li>• DUT is in "Registered" state</li> <li>• DUT(s) have a DN assigned</li> <li>• DUT(s) network data is correct: (VLAN, DNS, DHCP, TFTP, CUCM)</li> <li>• DUT(s) Phone Load version is correct</li> <li>• Users associated to DUT(s) respectively</li> <li>• DUT(s) registered to Local CUCM with assigned DN's</li> </ul>
<b>Observations</b>	PASS DUT is registered in CUCM manually.

## 6.2 Phase 2 Functional Test

These tests test the various features of the 3<sup>rd</sup> party product and its various components. This involves the testing of the product against the Application note and IVT questionnaire requirements to ensure that it functions reliably and consistently in a manner that meets the requirements.

### 6.2.1 Intra-Cluster Calls

Test Case Details	
<b>Title</b>	Intra-Cluster Calls
<b>Description</b>	Verify intra-cluster calls between DUT, SCCP and SIP endpoints
<b>Test Setup</b>	Local CUCM <ul style="list-style-type: none"> <li>• DUT(s): DUT(ring and page extension)</li> <li>• SCCP: Local SCCP Phone1</li> <li>• SIP: Local SIP Phone1</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP Phone dials DUT ring extension and hear the ringing from the DUT</li> <li>2. Local SIP Phone on-hook after 30s</li> <li>3. Check for the audio.</li> <li>4. Local SIP Phone dials DUT Page extension and DUT auto answers the call</li> <li>5. Local SIP Phone on-hook after 30s</li> <li>6. Check for the audio.</li> <li>7. Local SCCP Phone dials DUT ring extension and DUT answers the call</li> <li>8. Local SCCP Phone on-hook after 30s.</li> <li>9. Check for the audio.</li> <li>10. Local SCCP Phone dials DUT page extension and DUT answers the call</li> <li>11. Local SCCP Phone on-hook after 30s.</li> </ol>

	12. Check for the audio. 13. Retrieve CDR from CUCM 14. Check Calling, Called, Duration, Origination & Termination Cause Codes
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• 4 calls establish with 2-way audio path</li> <li>• Calling and Called Parties hear ring-back and ring tone</li> <li>• 4 calls terminate normally</li> </ul>
<b>Observations</b>	PASS DUT auto answer the call.

### 6.2.2 Inter-Cluster Call

Test Case Details	
<b>Title</b>	Inter-Cluster Call
<b>Description</b>	Verify inter-cluster calls between DUT(s), SCCP and SIP endpoints
<b>Test Setup</b>	Local CUCM <ul style="list-style-type: none"> <li>• DUT(s):DUT</li> </ul> Remote CUCM <ul style="list-style-type: none"> <li>➤ SCCP: Remote SCCP Phone1</li> <li>➤ SIP: Remote SIP Phone1</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Remote SIP Phone dials DUT and DUT answers the call</li> <li>2. Remote SIP Phone on-hook after 30s.</li> <li>3. Check for the audio.</li> <li>4. Remote SCCP Phone dials DUT and DUT answers the call</li> <li>5. Remote SCCP Phone on-hook after 30s.</li> <li>6. Check for the audio.</li> <li>7. Calling &amp; Called party release calls alternatively</li> <li>8. Retrieve CDR from CUCM</li> <li>9. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• 2 calls establish with audio path</li> <li>• Calling and Called Parties hear ring-back and ring tone</li> <li>• 2 calls terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>

<b>Observations</b>	PASS DUT auto answer the call.
---------------------	-----------------------------------

### 6.2.3 One Way Page mode

Test Case Details	
<b>Title</b>	One Way Page mode
<b>Description</b>	Verify One Way Page mode calls between DUT(s), SCCP and SIP endpoints
<b>Test Setup</b>	Local CUCM <ul style="list-style-type: none"> <li>• DUT(s);DUT</li> <li>• SCCP: Local SCCP Phone1</li> <li>• SIP: Local SIP Phone1</li> </ul>
<b>Procedure</b>	<ul style="list-style-type: none"> <li>• Local SIP Phone dials DUT</li> <li>• DUT answers the call</li> <li>• Local SIP Phone on-hook after 30s.</li> <li>• Check for the audio.</li> <li>• Local SCCP Phone dials DUT and DUT answers the call</li> <li>• Local SCCP Phone on-hook after 30s.</li> <li>• Check for the audio.</li> <li>• Calling &amp; Called party release calls alternatively.</li> <li>• Retrieve CDR from CUCM</li> <li>• Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ul>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• 2 calls established with one way audio path</li> <li>• Calling and Called Parties hear ring-back and ring tone</li> <li>• 2 calls terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS DUT auto answer the call.

### 6.2.4 Two Way Page mode

Test Case Details	
<b>Title</b>	Two Way Page mode
<b>Description</b>	Verify Two Way Page mode calls between DUT(s), SCCP and SIP endpoints

<b>Test Setup</b>	Local CUCM <ul style="list-style-type: none"> <li>• DUT(s):DUT</li> <li>• SCCP: Local SCCP Phone1</li> <li>• SIP: Local SIP Phone1</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP Phone dials DUT and DUT answers the call</li> <li>2. Local SIP Phone on-hook after 30s.</li> <li>3. Check for the 2-way audio.</li> <li>4. Local SCCP Phone dials DUT and DUT answers the call</li> <li>5. Local SCCP Phone on-hook after 30s.</li> <li>6. Check for the 2-way audio.</li> <li>7. Calling &amp; Called party release calls alternatively</li> <li>8. Retrieve CDR from CUCM</li> <li>9. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
	<ul style="list-style-type: none"> <li>• 2 calls establish with bi-directional audio path</li> <li>• Calling and Called Parties hear ring-back and ring tone</li> <li>• 2 calls terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

### 6.2.5 Delayed Page mode

Test Case Details	
<b>Title</b>	Delayed Page mode
<b>Description</b>	Verify Delayed Page mode calls between DUT(s), SCCP and SIP endpoints
<b>Test Setup</b>	Local CUCM <ul style="list-style-type: none"> <li>• DUT(s):DUT</li> <li>• SCCP: Local SCCP Phone1</li> <li>• SIP: Local SIP Phone1</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP Phone dials DUT and DUT answers the call</li> <li>2. Check for the audio.</li> <li>3. Local SIP Phone on-hook after 30s.</li> <li>4. Local SCCP Phone dials DUT and DUT answers the call</li> <li>5. Local SCCP Phone on-hook after 30s.</li> </ol>

	<ol style="list-style-type: none"> <li>6. Check for audio.</li> <li>7. Calling &amp; Called party release calls alternatively</li> <li>8. Retrieve CDR from CUCM</li> <li>9. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
	<ul style="list-style-type: none"> <li>• Call established between Local SIP phone1 and DUT and after call termination the DUT plays the audio.</li> <li>• Call established between Local SCCP phone1 and DUT and after call termination the DUT plays the audio.</li> <li>• 2 calls terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	<p>PASS</p> <p>After hearing ring back tone from DUT user should give an announcement or voice message, when the cisco IP phone goes on hook the DUT will give the announcement. The DUT stores the voice message for some time temporarily. Maximum Page timeout is 5 minutes.</p>

### 6.2.6 Off-Net Calls

Test Case Details	
<b>Title</b>	Off-Net Calls
<b>Description</b>	Verify basic calls between DUT(s) and PSTN endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT</li> <li>• PSTN Phone → PSTN (SIP);</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. PSTN dials DUT and DUT answers the call</li> <li>2. PSTN on-hook after 60s</li> <li>3. Retrieve CDR from CUCM Server</li> <li>4. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call established with audio path</li> <li>• Calling and Called Parties hear ring-back and ring tone</li> <li>• 2 Calls terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>

Observations	PASS
--------------	------

### 6.2.7 Functional Test: CFA

Test Case Details	
<b>Title</b>	Functional Test: CFA
<b>Description</b>	Verify "CFA" calls between DUT(s), SCCP, SIP and PSTN endpoints
<b>Test Setup</b>	<p>Local CUCM</p> <ul style="list-style-type: none"> <li>• DUT(s):DUT</li> <li>• SCCP: Local SCCP Phone1</li> <li>• SIP: Local SIP Phone1</li> </ul> <p>Remote CUCM</p> <ul style="list-style-type: none"> <li>• SCCP: Remote SCCP Phone1</li> <li>• SIP: Remote SIP Phone1</li> </ul> <p>PSTN Phone: PSTN</p> <p>Enable CFA for DN(s):</p> <ul style="list-style-type: none"> <li>• Device→Phone→DUT→CFA→Local SCCP Phone1 (SCCP)</li> <li>• Device→Phone→ DUT →CFA→ Local SIP Phone1</li> <li>• Device→Phone→Local SCCP Phone→CFA→DUT(DUT)</li> <li>• Device→Phone→SIP phone →DUT (DUT)</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Remote SIP phone1 dials DUT, Local SCCP phone1 answers and Local SCCP phone1 on-hook after 30s</li> <li>2. Remote SCCP phone 1 dials DUT, Local SIP phone answers and , Local SIP Phone1 answers and Local SIP Phone1 on-hook after 30s</li> <li>3. Remote SIP phone1 dials Local SCCP phone1, DUT answers and Remote SIP phone 1 on-hook after 30s</li> <li>4. Retrieve CDR from CUCM</li> <li>5. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol> <p><b>Note:</b> Upon test completion, remove "CFA" feature for devices before proceeding to next test case</p> <p>CUCM Administration GUI: Device→Phone→DN→Line→Call Forward All →Destination→blank</p>

<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call forward to Local SCCP phone1 and phone rings</li> <li>• Call establish between Local SIP phone1 &amp; Local Sip phone with 2-way audio</li> <li>• Call terminate normally</li> <li>• Call forward to Local SIP phone1 and phone rings</li> <li>• Call establish between Local SCCP phone1 &amp; Local SIP phone with 2-way audio</li> <li>• Call terminate normally</li> <li>• Call forward to DUT and phone rings</li> <li>• Call establish between Local SIP phone1 &amp; DUT with 2-way audio</li> <li>• Call terminate normally</li> <li>• 6 CDR(s) retrieved</li> <li>• Selected CDR(s) fields match calls</li> </ul>
<b>Observations</b>	PASS

### 6.2.8 Functional Test: CFNA

Test Case Details	
<b>Title</b>	Functional Test: CFNA
<b>Description</b>	Verify "CFNA" calls between DUT(s), SCCP and SIP endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM <ul style="list-style-type: none"> <li>· DUT(s);DUT</li> <li>· SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul> </li> <li>• Remote CUCM <ul style="list-style-type: none"> <li>· SCCP: Remote SCCP Phone1; SIP: Remote SIP Phone1;</li> </ul> </li> <li>• Voicemail and Call Waiting disabled for all DN(s) Device→Phone→DN→Line→ <ul style="list-style-type: none"> <li>· Voicemail→No Voicemail</li> <li>· Call Waiting→Max. Calls→1; Busy Trigger→1;</li> </ul> </li> </ul> <p>Enable CFNA for DN(s):</p> <ul style="list-style-type: none"> <li>· Device→Phone→DUT→CFNA→Local SCCP Phone1 (SCCP)</li> <li>· Device→Phone→DUT→CFNA→Remote SIP Phone1 (SIP)</li> <li>· Device→Phone→Local SCCP Phone1→CFNA→DUT (DUT)</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Remote SIP phone1 dials DUT, DUT does not answer and Local SCCP phone1 answers</li> <li>2. Local SCCP phone1 on-hook after 30s</li> </ol>

	<ol style="list-style-type: none"> <li>3. Remote SIP phone1 dials DUT, DUT does not answer and Local SIP phone1 answers</li> <li>4. Local SIP phone1 on-hook after 30s</li> <li>5. Remote SIP phone1 dials Local SIP phone 1 , Local SIP phone 1 does not answer and DUT answers</li> <li>6. Remote SIP phone1 on-hook after 30s</li> <li>7. Retrieve CDR from CUCM</li> <li>8. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call forward to Local SCCP phone1 after ring timeout</li> <li>• Call establish between Remote SIP phone 1 &amp; Local SCCP phone1 with 2-way audio</li> <li>• Call terminate normally</li> <li>• Call forward to Local SIP phone1 after ring timeout</li> <li>• Call establish between Remote SCCP phone 1 &amp; Local SIP phone1 with 2-way audio</li> <li>• Call terminate normally</li> <li>• Call forward to DUT after ring timeout</li> <li>• Call establish between Remote SIP phone 1 &amp; DUT with 2-way audio</li> <li>• Call terminate normally</li> <li>• CDR(s) retrieved</li> <li>• Selected CDR(s) fields match calls</li> </ul>
<b>Observations</b>	<p>PASS</p> <p>For this test case DUT's ring extension is used.</p>

### 6.2.9 Functional Test: CFB

Test Case Details	
<b>Title</b>	Functional Test: CFB
<b>Description</b>	Verify "CFB" calls between DUT(s), SCCP and SIP endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM <ul style="list-style-type: none"> <li>• DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul> </li> <li>• Remote CUCM <ul style="list-style-type: none"> <li>• SCCP: Remote SCCP Phone1; SIP: Remote SIP Phone1;</li> </ul> </li> <li>• Voicemail and Call Waiting disabled for all DNs</li> </ul>

	<p>Enable CFB for DN(s):</p> <ul style="list-style-type: none"> <li>· Device→Phone→DUT→CFB→Local SCCP Phone1 (SCCP)</li> <li>· Device→Phone→Local SCCP Phone1→CFB→DUT</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Remote SIP phone1 dials DUT and DUT answers the call</li> <li>2. Local SIP phone 1 dials the DUT, Local SCCP phone 1 answer the call.</li> <li>3. Remote SIP phone 1 goes on hook.</li> <li>4. Local SIP phone 1 goes on hook.</li> <li>5. Remote SCCP phone dials local SCCP phone 1 and Local SCCP phone 1 answers</li> <li>6. Local SIP phone 1 dials local SCCP phone 1, DUT answer the call.</li> <li>7. Remote SCCP phone 1 goes on hook.</li> <li>8. Local SIP phone 1 goes on hook.</li> <li>9. Retrieve CDR from CUCM</li> <li>10. Check Calling, Called, Duration, origination &amp; termination cause codes matches the calls</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Remote SIP Phone1 &amp; DUT with 2-way audio</li> <li>• Call forward to Local SCCP phone 1 and phone rings</li> <li>• Call establish between Local SIP phone 1 &amp; Local SCCP phone 1 with 2-way audio</li> <li>• Remote SIP phone 1 end the call.</li> <li>• Local SCCP phone 1 end the call.</li> <li>• Call establish between Remote SCCP Phone1 &amp; local SCCP phone 1 with 2-way audio</li> <li>• Call forward to DUT and DUT answer the call.</li> <li>• Call establish between Local SIP phone 1 &amp; DUT with 2-way audio</li> <li>• Remote SIP phone 1 end the call.</li> <li>• Local SCCP phone 1 end the call.</li> <li>• 6 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

## 6.2.10 Functional Test: Hold & Resume

Test Case Details	
<b>Title</b>	Functional Test: Hold & Resume
<b>Description</b>	Verify "Hold & Resume" calls between DUT(s), SIP, SCCP and PSTN endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s): DUT SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> <li>• PSTN: PSTN</li> <li>• Remove all CFA, CFNA &amp; CFB settings on DN(s) used in previous test cases</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SCCP Phone1 dials DUT, DUT answers and Local SCCP Phone1 hits "Hold" after 20s</li> <li>2. Local SCCP Phone1 hits "Resume" after 20s and Local SCCP Phone1 on-hook after 30s</li> <li>3. Local SIP Phone1 dials DUT, DUT answers incoming call and Local SIP Phone1 on-hold</li> <li>4. Local SIP Phone1 hits "Resume" after 60s and DUT on-hook after 30s</li> <li>5. Repeat steps 1-2 for PSTN. Replace Local SCCP phone 1 with PSTN</li> <li>6. Retrieve CDR from CUCM</li> <li>7. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SCCP Phone1 &amp; DUT with 2-way audio</li> <li>• DUT is On-Hold (MOH)</li> <li>• Call resume between Local SCCP Phone1 &amp; DUT</li> <li>• Call terminate normally</li> <li>• Call establish between Local SIP Phone1 &amp; DUT with 2-way audio</li> <li>• DUT is On-Hold (MOH)</li> <li>• Call resume between Local SIP phone 1 &amp; DUT</li> <li>• Call terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

## 6.2.11 Functional Test: Ringing Transfer

Test Case Details	
<b>Title</b>	Functional Test: Blind Transfer
<b>Description</b>	<ul style="list-style-type: none"> <li>Verify "Blind Transfer" calls between DUT(s), SIP and SCCP endpoints</li> </ul>
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> <li>PSTN: PSTN</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>Local SIP phone 1 dials Local SCCP phone 1, Local SCCP phone 1 answers and hits "Transfer" after 30s</li> <li>Local SCCP phone 1 dials DUT, Local SCCP phone1 hits "Transfer" and Local SCCP phone1 is on-hook</li> <li>DUT answer the call</li> <li>Local SIP phone 1 goes on-hook after 60s</li> <li>PSTN dials Local SCCP phone 1, Local SCCP phone 1 answers and hits "Transfer" after 30s</li> <li>Local SCCP phone 1 dials DUT and hits "Transfer" and Local SCCP phone1 is on-hook</li> <li>DUT answer the call.</li> <li>PSTN goes on-hook after 60s</li> <li>Check the Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>Call establish between Local SIP phone 1 &amp; Local SCCP phone 1 with 2-way audio</li> <li>Local SIP phone 1 is On-Hold (MOH)</li> <li>Local SCCP phone 1 blind transfer to DUT with 2-way audio path</li> <li>All calls terminate normally</li> <li>Call establish between PSTN &amp; Local SCCP phone 1 with 2-way audio</li> <li>PSTN is On-Hold (MOH)</li> <li>Local SCCP phone 1 blind transfer to DUT</li> <li>All calls terminate normally</li> <li>4 CDR(s) retrieved</li> <li>Selected fields in CDR(s) match calls</li> </ul>

Observations	PASS
--------------	------

### 6.2.12 Functional Test: Consult Transfer

Test Case Details	
<b>Title</b>	Functional Test: Consult Transfer
<b>Description</b>	Verify "Consult Transfer" calls between DUT(s), SIP, SCCP and PSTN endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> <li>• PSTN: PSTN</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP phone 1 dials Local SCCP phone 1, Local SCCP phone 1 answers and hits "Transfer" after 30s</li> <li>2. Local SCCP phone 1 dials DUT, And DUT answers the call</li> <li>3. Local SCCP phone1 hits "Transfer" and Local SCCP phone1 is on-hook</li> <li>4. Local SIP phone 1 goes on-hook after 60s</li> <li>5. PSTN dials Local SCCP phone 1, Local SCCP phone 1 answers and hits "Transfer" after 30s</li> <li>6. Local SCCP phone 1 dials DUT, and DUT answer the call.</li> <li>7. Local SCCP phone1 hits "Transfer" and Local SCCP phone1 is on-hook</li> <li>8. PSTN goes on-hook after 60s</li> <li>9. Check the Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> <li>10. Retrieve CDR from CUCM</li> <li>11. Check the Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SIP phone 1 &amp; Local SCCP phone 1 with 2-way audio</li> <li>• Local SIP phone 1 is On-Hold (MOH)</li> <li>• Call establish between Local SCCP phone 1 &amp; DUT with 2-way audio</li> <li>• Local SCCP phone 1 transfer to DUT with 2-way audio path</li> <li>• All calls terminate normally</li> <li>• Call establish between PSTN &amp; Local SCCP phone 1 with 2-way audio</li> <li>• PSTN is On-Hold (MOH)</li> </ul>

	<ul style="list-style-type: none"> <li>• Call establish between Local SCCP phone 1 &amp; DUT with 2-way audio</li> <li>• Local SCCP phone 1 transfer to DUT</li> <li>• Local SCCP phone 1 hears reorder tone</li> <li>• All calls terminate normally</li> <li>• 6 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

### 6.2.13 Functional Test: Conference Call

Test Case Details	
<b>Title</b>	Functional Test: Conference Call
<b>Description</b>	Verify Conference call between DUT(s), SIP, SCCP and PSTN endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> <li>• Service parameter: Drop Ad Hoc Conference → Never (Default)</li> <li>• Media Resource Group (MRG) &amp; Media Resource Group List (MRG_L)</li> <li>• Assign Media Resource: System → Device Pool → ep_pool → Media Resource Group List → MRG_L</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SCCP Phone1 dials Local SIP Phone1, Local SIP Phone1 answers and DUT hits "Conference" after 30s</li> <li>2. Local SIP Phone1 dials DUT, DUT answers</li> <li>3. Local SIP Phone1 hits "Conference" after 30s</li> <li>4. Local SCCP Phone1 goes on-hook after 60s</li> <li>5. Local SIP Phone1 goes on-hook after 30s</li> <li>6. PSTN dials Local SIP Phone1, Local SIP Phone1 answers and hits "Conference" after 30s</li> <li>7. Local SIP Phone1 dials DUT, DUT answers</li> <li>8. Local SIP Phone1 hits "Conference" after 30s</li> <li>9. PSTN goes on-hook after 60s</li> <li>10. Local SIP Phone1 goes on-hook after 30s</li> <li>11. Retrieve CDR from CUCM</li> <li>12. Check the Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>

<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SCCP Phone1 &amp; Local SIP Phone1 with 2-way audio</li> <li>• Local SCCP Phone1 is On-hold (MOH)</li> <li>• Local SIP Phone1 is conference-in</li> <li>• 3 parties in conference call with 3-way audio</li> <li>• Local SCCP Phone1 left conference. Local SIP Phone1 &amp; DUT connect directly</li> <li>• All calls terminate normally</li> <li>• Call establish between PSTN &amp; Local SIP Phone1 with 2-way audio</li> <li>• PSTN is On-Hold (MOH)</li> <li>• PSTN, Local SIP Phone1 &amp; DUT is conference-in</li> <li>• All 3 parties in conference call with 3-way audio</li> <li>• PSTN leave conference. Local SIP Phone1 &amp; DUT connect directly</li> <li>• All calls terminate normally</li> <li>• CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

#### 6.2.14 Functional Test: Jabber for Windows

Test Case Details	
<b>Title</b>	Functional Test: Jabber for Windows
<b>Description</b>	Verify Jabber calls originating & terminating to DUT(s) endpoints (Jabber for Windows)
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s): DUT SCCP: Local SCCP Phone1;</li> <li>• Jabber for Windows (Device → Phone → Add New → CSFUSER1:DN:1922; End User:juser01/123456)</li> <li>• Windows PC with Jabber clients installed</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. 1922 dials DUT (Duration=30s)</li> <li>2. 1922 dials Local SCCP phone 1 (Duration=30s)</li> <li>3. Local SCCP phone 1 dials DUT (Duration=30s)</li> <li>4. Calling and Called party goes on-hook alternatively</li> <li>5. Retrieve CDR from CUCM</li> <li>6. Check the Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>

<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• 3 calls establish with 2-way audio</li> <li>• 3 calls terminate normally</li> <li>• 3 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

#### 6.2.15 Functional Test: IP Communicator

Test Case Details	
<b>Title</b>	Functional Test: IP Communicator
<b>Description</b>	Verify IP Communicator calls originating & terminating to DUT(s) endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT, SIP: Local SIP Phone1; CIPC:1940;</li> <li>• Launch IP Communicator on a Windows PC</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. 1940 dials DUT (Duration=30s)</li> <li>2. 1940 dials Local SIP phone 1 (Duration=30s)</li> <li>3. Local SIP phone 1 dials DUT(Duration=30s)</li> <li>4. Calling and Called party goes on-hook alternatively</li> <li>5. Retrieve CDR from CUCM</li> <li>6. Check the Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• 3 calls establish with 2-way audio</li> <li>• 3 calls terminate normally</li> <li>• 3 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

#### 6.2.16 Functional Test: Mobile Voice Access (MVA)

Test Case Details	
<b>Title</b>	Functional Test: Mobile Voice Access (MVA)
<b>Description</b>	Verify Inbound Mobile Voice Access (MVA) calls from DUT(s) endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> <li>• Remote CUCM → DUT:DUT;</li> </ul>

	<ul style="list-style-type: none"> <li>• CUCM Service Parameter: <ul style="list-style-type: none"> <li>• Enable Enterprise Feature Access → True</li> <li>• Enable Mobile Voice Access → True</li> <li>• Mobile Voice Access Number → 8005555</li> <li>• Matching Caller ID with Remote Destination → Partial Match</li> <li>• Number of Digits for Caller ID Partial Match → 7</li> </ul> </li> <li>• Mobile Voice Access service running on CUCM-PUB</li> <li>• Mobile Voice Access enabled on Voice Gateway</li> <li>• MVA # provisioned in CUCM: Media Resources → Mobile Voice Access → Add New → 8005555</li> <li>• Local Cluster Single Number Reach (SNR) configured for Local SIP phone 1 → Remote Device: 234- Local SIP phone 2: <ul style="list-style-type: none"> <li>• Add Remote Destination Profile: Device → Device Settings → Remote Destination Profile → Add New → mobile1_rdp <ul style="list-style-type: none"> <li>➢ Userid: dutuser02</li> <li>➢ Add New Remote Destination: <ul style="list-style-type: none"> <li>• Name → Mobility_1</li> <li>• Destination Number → 234 Local SIP phone 2</li> <li>• Check “Enable Unified Mobility”, “Enable Single Number Reach” &amp; “Enable Move to Mobile”</li> </ul> </li> </ul> </li> <li>• Device Settings → Softkey Template → SIP_EP_User → Add “Mobility” softkey (On-Hook &amp; Connected)</li> <li>• User Management → End User → dutuser02 → Check “Enable Mobility” &amp; “Enable Mobile Voice Access”</li> <li>• Device → Phone → Local SIP phone → Owner userid → user02</li> <li>• Remote Device: Device → Phone → Local SIP phone 2 → Line → No Answer Ring Duration → 60</li> </ul> </li> </ul>
<p><b>Procedure</b></p>	<ol style="list-style-type: none"> <li>1. (Mobile device) dial MVA #8005555</li> <li>2. Mobile User enters PIN: 123456# &amp; DN: DUT#</li> <li>3. Mobile User dial DUT#</li> <li>4. DUT answers</li> <li>5. Mobile device sends DTMF *74 to handoff session after 30s</li> <li>6. DUT goes on-hook after 60s</li> <li>7. Retrieve CDR from CUCM</li> </ol>

	8. Check the Calling, Called, Duration, Origination & Termination Cause Codes
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Mobile user prompted for PIN &amp; destination DUT #</li> <li>• DUT is ringing</li> <li>• Call establish between Mobile device &amp; DUT with 2-way audio</li> <li>• Call hand-off to DUT</li> <li>• Call terminate normally</li> <li>• 1 CDR retrieved</li> <li>• Selected fields in CDR matches call</li> </ul>
<b>Observations</b>	PASS

### 6.3 Phase 3 Negative Tests

These tests are executed to determine the ability of the impact on calls, the CUCM and the 3<sup>rd</sup> party application when combinations of the aforementioned fail by power failure or network connectivity problems. Testing robustness of the application through hardware and software fault insertion i.e. Failover/fallback.

#### 6.3.1 Negative Test: PUB Failure

Test Case Details	
<b>Title</b>	Negative Test: PUB Failure
<b>Description</b>	Verify a PUB failure should not affect stable or transient calls on DUT(s)
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT ;SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1) Local SIP phone 1 dials DUT, DUT answers</li> <li>2) Local SCCP Phone1 dials Local SIP phone 2, Local SIP phone 2 answers</li> <li>3) Access CUCM-PUB server via SSH (Local Cluster)</li> <li>4) Enter CLI: utils system restart &lt;CR&gt; yes</li> <li>5) Call terminates normally.</li> <li>6) Local SCCP Phone1 dials DUT, DUT answers 2nd incoming call</li> <li>7) Called party goes on-hook for all 3 calls</li> <li>8) Retrieve CDR from CUCM</li> <li>9) Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>

<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SIP phone 1 &amp; DUT with 2-way audio</li> <li>• Call establish between Local SCCP Phone1 &amp; Local SIP phone 2 with 2-way audio</li> <li>• CUCM-PUB is restarted</li> <li>• Stable calls not impacted by PUB restart</li> <li>• Call establish between Local SCCP Phone1 &amp; DUT with 2-way audio</li> <li>• Transient calls not impacted by PUB restart</li> <li>• All calls terminate normally</li> <li>• CUCM-PUB is in-service</li> <li>• All calls successful after PUB failure recovery</li> <li>• 3 CDR(s) retrieved</li> <li>• Selected fields in CDR matches calls</li> </ul>
<b>Observations</b>	PASS

### 6.3.2 Negative Test: SUB Failure

Test Case Details	
<b>Title</b>	Negative Test: SUB Failure
<b>Description</b>	Verify a SUB failure should not affect stable calls on DUT(s)
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP phone 1 dials DUT, DUT answers</li> <li>2. Local SCCP Phone1 dials Local SIP phone 2, Local SIP phone 2 answers</li> <li>3. Access CUCM-SUB server via SSH (Local Cluster)</li> <li>4. Enter CLI: utils system restart &lt;CR&gt; yes</li> <li>5. Call terminates normally.</li> <li>6. Local SCCP Phone1 dials DUT, DUT answers 2nd incoming call</li> <li>7. Called party goes on-hook for all 3 calls</li> <li>8. Retrieve CDR from CUCM</li> <li>9. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SIP phone 1 &amp; DUT with 2-way audio</li> </ul>

	<ul style="list-style-type: none"> <li>• Call establish between Local SCCP Phone1 &amp; Local SIP phone 2 with 2-way audio</li> <li>• CUCM-PUB is restarted</li> <li>• Stable calls not impacted by PUB restart</li> <li>• Call establish between Local SCCP Phone1 &amp; DUT with 2-way audio</li> <li>• Transient calls not impacted by PUB restart</li> <li>• All calls terminate normally</li> <li>• CUCM-PUB is in-service</li> <li>• All calls successful after PUB failure recovery</li> <li>• 3 CDR(s) retrieved</li> <li>• Selected fields in CDR matches calls</li> </ul>
<b>Observations</b>	<p>PASS</p> <p>Call cannot be hanged up in DUT during the preservation mode.</p>

### 6.3.3 Negative Test: Phone Network Failure

Test Case Details	
<b>Title</b>	Negative Test: Phone Network Failure
<b>Description</b>	Verify DUT(s) recovers from a network failure
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP phone 1 dials DUT, DUT answers</li> <li>2. Unplug network cable from device DN:DUT</li> <li>3. Restore the network cable after 60s</li> <li>4. Local SIP Phone1 dials DUT, DUT answers</li> <li>5. DUT goes on-hook after 60s</li> <li>6. Retrieve CDR from CUCM</li> <li>7. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SIP phone 1 &amp; DUT with 2-way audio</li> <li>• Network failure reported on device DN:DUT</li> <li>• Stable call drops</li> <li>• Device DUT re-registers after network cable restored</li> <li>• Network Data: DNS, DHCP, TFTP, CUCM, VLAN, Load ID are restored on device</li> </ul>

	<ul style="list-style-type: none"> <li>• Call establish between Local SIP Phone1 &amp; DUT with 2-way audio</li> <li>• Call terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

#### 6.3.4 Negative Test: Phone Power Failure

Test Case Details	
<b>Title</b>	Negative Test: Phone Power Failure
<b>Description</b>	Verify DUT(s) recovers from a power failure
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s):DUT;SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP phone 1 dials DUT, DUT answers</li> <li>2. Remove power cable from DUT</li> <li>3. Restore power cable after 60s</li> <li>4. Local SIP Phone1 dials DUT, DUT answers call</li> <li>5. Local SIP phone 1 goes on-hook after 60s</li> <li>6. Retrieve CDR from CUCM</li> <li>7. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Call establish between Local SIP phone 1 &amp; DUT with 2-way audio</li> <li>• DUT lost power</li> <li>• Stable call drops</li> <li>• Device DUT re-registers after power is restored</li> <li>• Network Data: DNS, DHCP, TFTP, CUCM, VLAN, Load ID are restored on device</li> <li>• Call establish between Local SIP Phone1 &amp; DUT with 2-way audio</li> <li>• Call terminate normally</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

## 6.4 Phase 4 Miscellaneous Tests

These tests are executed to verify specific information about the third-party products provided by partners

### 6.4.1 Miscellaneous Test: Codec (G722)

Test Case Details	
<b>Title</b>	Miscellaneous Test: Codec (G722)
<b>Description</b>	Verify URI calls between DUT(s) & SIP endpoints for In-band Codec (G722)
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT(s): DUT. SCCP: Local SCCP Phone1 ; SIP: Local SIP Phone1 ;</li> <li>• Go to System → Region Information → Audio Codec Preference List → Add New → G722 → Select G722 Codec</li> <li>• Go to System → Region Information → Region → Add New → G722-Region → G722</li> <li>• Go to System → Device Pool → Add New → G722-dp → Region → G722-Region</li> <li>• Update DUT with device pool=G722</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Local SIP phone 1 hits dials DUT</li> <li>2. DUT answers call</li> <li>3. Local SIP phone 1 goes on-hook after 60s</li> <li>4. Local SCCP phone 1 hits dials DUT</li> <li>5. DUT answers call</li> <li>6. Local SCCP phone 1 goes on-hook after 60s</li> <li>7. Retrieve CDR from CUCM Server</li> <li>8. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• 2 calls establish with 2 way audio for G722 codec</li> <li>• 2 calls terminate normally</li> <li>• Voice quality was good for codec type</li> <li>• 2 CDR(s) retrieved</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

### 6.4.2 Long Duration Calls

Test Case Details	
<b>Title</b>	Long Duration Calls
<b>Description</b>	Verify long duration calls between DUT(s), SCCP, SIP and PSTN endpoints
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>Local SIP phone 1 dials DUT, DUT answers (Duration: 1 Hr.)</li> <li>Local SCCP Phone1 dials DUT, DUT answers (Duration: 1 Hr)</li> <li>Retrieve CDR from CUCM</li> <li>Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>Call establish between Local SIP phone 1 &amp; DUT with 2-way audio</li> <li>Call establish between Local SCCP Phone1 &amp; DUT with 2-way audio</li> <li>All long duration calls were stable with 2-way audio</li> <li>2 CDR(s) retrieved</li> <li>Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS Page timeout should be select for 60 mins.

### 6.4.3 Miscellaneous Test: Cisco Phone Models

Test Case Details	
<b>Title</b>	Miscellaneous Test: Cisco Phone Models
<b>Description</b>	Verify calls and mid-call features between DUT(s) and various Cisco IP Phone Models
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>Local CUCM → DUT(s):DUT; SCCP: Local SCCP Phone1; SIP: Local SIP Phone1;</li> <li>Cisco Phone Models:8861, 8945, 7975, 9971,7842</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>Cisco IP Phone dials DUT, DUT answers and Cisco IP Phone on-hook after 120s</li> <li>Cisco IP Phone dials DUT , DUT answers and Cisco IP Phone hits "Hold" after 20s</li> </ol>

	<ol style="list-style-type: none"> <li>3. Cisco IP Phone hits "Resume" after 20s, Cisco IP Phone on-hook after 120s</li> <li>4. Cisco IP Phone dials Local SIP phone 1, Local SIP phone answers and Cisco IP Phone hits "Transfer" after 20s</li> <li>5. Cisco IP Phone dials DUT, Cisco IP Phone hits "Transfer and Cisco IP Phone on-hook</li> <li>6. Local SIP phone 1 goes on-hook after 120s</li> <li>7. Repeat steps 1-6 by replacing DN: Cisco IP Phone with DN(s) of other Cisco phone models</li> <li>8. Retrieve CDR from CUCM</li> <li>9. Check Calling, Called, Duration, Origination &amp; Termination Cause Codes</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Calls establish between DUT &amp; Cisco IP Phone</li> <li>• Call Hold/Resume between DUT &amp; Cisco IP Phone</li> <li>• Blind Transfer between DUT &amp; Cisco IP Phone</li> <li>• Conference Call between DUT &amp; Cisco IP Phone</li> <li>• CDR(s) retrieved for all the calls</li> <li>• Selected fields in CDR(s) match calls</li> </ul>
<b>Observations</b>	PASS

#### 6.4.4 CDP test cases (to show DUT in switch)

Test Case Details	
<b>Title</b>	CDP test cases (to show DUT in switch )
<b>Description</b>	Verify the DUT device name shown in the Switch
<b>Test Setup</b>	<ul style="list-style-type: none"> <li>• Local CUCM → DUT.</li> </ul>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Connect the DUT to switch port.</li> <li>2. Access switch console via SSH (Local Cluster)</li> <li>3. Enter CLI: show cdp</li> <li>4. Enter CLI: Show cdp neighbors.</li> <li>5. Check the Device id, local interface and other details.</li> </ol>
<b>Expected Results</b>	<ul style="list-style-type: none"> <li>• Global cdp information is displayed.</li> <li>• It will display the cdp information about the DUT.</li> </ul>
<b>Observations</b>	PASS

#### 6.4.5 CDP test cases (to remove DUT in switch)

Test Case Details	
<b>Title</b>	CDP test cases (to remove DUT from switch )
<b>Description</b>	Verify the DUT device name not shown in the Switch
<b>Test Setup</b>	<ul style="list-style-type: none"><li>• Local CUCM → DUT.</li></ul>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Remove the DUT from the switch.</li><li>2. Access switch console via SSH (Local Cluster)</li><li>3. Enter CLI: Show cdp neighbors.</li><li>4. Check the Device id, local interface and other details.</li></ol>
<b>Expected Results</b>	<ul style="list-style-type: none"><li>• It will not display the cdp information about the DUT.</li></ul>
<b>Observations</b>	PASS
