

Wideband Audio for Clear and Intelligible IP Voice Paging, Notification, and Music.

The Algo 8188 SIP Ceiling Speaker features multiple SIP extensions for IP voice paging and notification capability. One or both extensions can be registered with any premise or cloud Unified Communication Server supporting 3rd party SIP endpoints.

Wideband G.722 codec support provides exceptional speech clarity and intelligibility in an HD Voice environment making voice paging and notification messages easier to understand, particularly in noisy environments.

Scalable and cost effective, the 8188 multicast capability allows a SIP registered speaker to simultaneously stream audio to additional speakers, while actively voice paging or playing a WAV file from memory. No additional SIP licences or paging server are required.

The integrated microphone enables talkback and listens for ambient noise to automatically increase speaker volume when necessary. An auxiliary input allows an optional wall button to initiate a SIP call or generate an announcement.

For ease and simplicity, the PoE blind-mount speaker installs quickly into the ceiling, and announces its static or DHCP IP address for access to the intuitive web interface. Additionally, the 8188 speaker supports auto-provisioning for minimal touch configuration.

Secure SIP communication is made possible by support for TLS and SRTP with mutual authentication.
