

ALGO

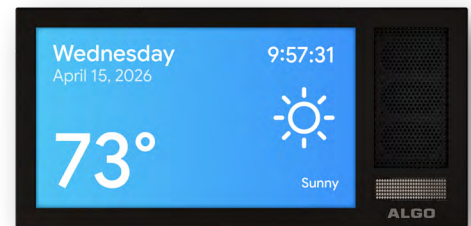

Firmware Release: Version 5.7

Firmware 5.7 introduces powerful enhancements across the Algo portfolio to improve visual communication, simplify scheduling and automation, expand API-driven workflows, and support secure third-party integrations.

Advanced IP Display Experiences

- Display weather information
- Display animated GIFs
- Show incoming caller information
- Customize InformaCast text notifications

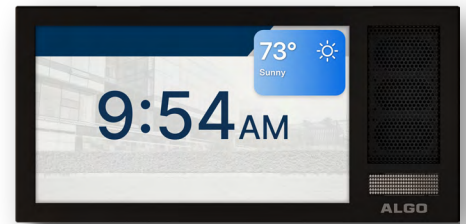

Improved Scheduling & Automation

- Create schedules without a required end date
- Skip and restore individual scheduled events
- Schedule API events

Enhanced Third-Party Integration Support

- OAuth authentication for secure integrations
- Combine API actions with other device events
- New APIs for scheduling and emergency alerts
- Expanded display, audio, DTMF and timed-action API controls
- Stream music from Internet radio streams and multicast to connected Algo devices

New 8450 IP Console Functionality

- Display weather information
- View and manage schedules from connected paging adapters
- View live intercom feeds from Algo 8039
- Enhanced InformaCast and Dialcast functionality
- Display full-screen custom images and animated GIFs
